

Landfill Diversion

419,000

tons of MSW processed

Enough to fill

1

Madison Square Garden

Or

51,000

garbage trucks, bumper to bumper

To Boston, MA

From York TTF

Energy Recovery

225,000

MWh net electricity export

Enough to power

21,000

homes for 1 year

Or, charge

52,000

Electric vehicles for 1 year

Net Greenhouse Gas (GHG) Avoidance

2.3 tons

of net CO₂e avoided* for every ton of waste diverted from landfill

887,000

metric tons of GHGs avoided

Equivalent to removing/displacing:

198,000

Vehicles from roads

994M

Pounds of coal

Environmental Compliance

up to

99% below

Federal emissions standards, based on annual averages**

100% compliant

with Continuous Emissions Monitoring (CEMS) standards

% Below Federal Standard

How Do Our Emissions Compare to Other Sources in the County?

Local air emissions*** in York County, PA

* GHGs are represented in CO₂equivalents (CO₂e) using global warming potentials (GWPs) to compare the warming power of different gases. This analysis uses the 20-yr GWP for methane of 81 from the IPCC's 6th assessment report. TTFs in the U.S. reduce lifecycle emissions by an average of 2.4 tons of CO₂e per ton of MSW diverted from landfills. The data presented here reflects facility-specific operating data and the local electrical grid, which can differ from the national average.

** 2023-2025 Average Annual Emissions compared to federal guidelines for existing facilities (40 CFR 60 Subpart Cb). Facility may be subject to more stringent requirements by permit or in accordance with other federal guidelines.

*** Based on the 2020 US EPA National Emissions Inventory; the most recently released complete inventory.

Where available, the facility's 2020 emissions were replaced with the most recently reported 2025 emissions.
